IS 205
HW 5 Narrative
Cristian Perez

Overall I felt this assignment was a good exercise to bring everything together that I've learned in the class and it was nice to make my own json files. Throughout the who assignment I was using demo3.py which is on the canvas page as a guide on how to structure my code. With that being said I felt step 1 was pretty easy and straightforward, although I did restructure my code from HW 4 so it made sense for HW 5. I did struggle to complete step 2 as I said I had some variables mixed up but I emailed professor Wickes for some help and I was able to get the mix-up sort out. Step 3 was easy and simple and I was able to do that part of the assignment without any problems. For step 4 I was a little confused because I wasn't too sure what to do, I emailed professor Wickes for help and I got an idea of what I was supposed to do but I was still confused. I ended up playing around a bit with the code but I still wasn't sure if I did it correctly.

Discussion question: I'm no expert in JSON files by any means so in all honesty I wouldn't be too sure on how to implement a schema to handle multiple files. But if I had to go ahead and take a guess I would say where the filename is located, could be changed to filenames, and what could be done is that instead of having only one file. You could add multiple files and make it a comma-separated list.
